CHAPTER 1

How to use

Random words:

```
>>> from random_words import RandomWords
>>> rw = RandomWords()
>>> word = rw.random_word()
>>> print word
factors

>>> word = rw.random_word('y')
>>> print word
yards

>>> words = rw.random_words(count=10)
>>> print words
['runs', 'experience', 'comments', 'freedom', 'permit', 'honks', 'pins', 'texts',
↳ 'grant', 'fathers']

>>> words = rw.random_words(letter='r', count=5)
>>> print words
['raincoat', 'reactance', 'room', 'relocation', 'rudders']

>>> words = rw.random_words(letter=None, count=2)
>>> print words
['tides', 'eights']
```

Random nicknames:

```
>>> from random_words import RandomNicknames
>>> rn = RandomNicknames()

>>> rn.random_nick()
'Fredrick'

>>> rn.random_nick('y')
```

(continues on next page)

(continued from previous page)

```
'York'

>>> rn.random_nick(letter='r', gender='m')
'Roosevelt'

>>> rn.random_nick(letter='r', gender='f')
'Rene'

>>> rn.random_nicks()
['Fionn']

>>> rn.random_nicks(count=10)
['Kristy', 'Imani', 'Delbert', 'Brevyn', 'Jasmin', 'Genevieve', 'Clodagh', 'Graham',
↳ 'Sondra', 'Ed']

>>> rn.random_nicks(letter='u', gender='f', count=4)
['Una', 'Uma', 'Ursula', 'Ulrica']

>>> rn.random_nicks(letter='a', gender='m', count=4)
['Anthony', 'Alec', 'Antonio', 'Adam']

>>> rn.random_nicks(gender='m', count=5)
['Elijah', 'Abraham', 'Noel', 'Myles', 'Pedro']

>>> rn.random_nicks(gender='f', count=5)
['Sabrina', 'Debbie', 'Jerri', 'Savannah', 'Wendy']
```

Random e-mails:

```
>>> from random_words import RandomEmails
>>> rand_mails = RandomEmails()

>>> rand_mails.randomMail()
'ernest@mail2java.com'

>>> rand_mails.randomMails()
['annmarie@mail2xox.com']

>>> rand_mails.randomMails(15)
['patrice@keko.com.ar', 'conor@mail2atom.com', 'vihan@mail2carolyn.com',
↳ 'felicia@looksmart.com.au', 'quinlan@accessgcc.com', 'aimee@china.net.vg',
↳ 'kate@mail2christmas.com', 'geoffrey@frommiami.com', 'lillie@comic.com',
↳ 'trinity@nagpal.net', 'bennett@webmail.co.za', 'jesse@chaiyomail.com',
↳ 'chase@iespana.es', 'mya@ijustdontcare.com', 'ramona@uole.com']
```

Lorem ipsum:

```
>>> from random_words import LoremIpsum
>>> li = LoremIpsum()
>>> li.get_sentence()
'Luctus molestie mazim netus temporsuspendisse, tristique nihil vestibulumnulla clita_
↳ possim.'

>>> li.get_sentences(5)
'Esse erosin magnis cursus, in ullamcorper sapien et accusam. Arcu fringilla_
↳ metusdonec. Magna tempus elitr lorem esse antesuspendisse, mi fusce luctus_
↳ lacusnulla nullam porta. Takimata tation porttitor, amet aliquammauris enimsed_
↳ dapibus. Assum lectus accusam fermentumfusce, iaculis turpis senectus fe_
↳ nunccurabitur.'
```

(continues on next page)

(continued from previous page)

```
>>> li.get_sentences_list(5)
['Platea egestas delenit curae iaculis ullamcorper.', 'Felissed sagittis volutpat_
↳vitae, lacus nullam massapellentesque urnapraesent.', 'Dapibusnam vitae nulla,
↳consectetuer conguenulla luptatum urnamorbi.', 'Ante nostra vero nihil eu odio.',
↳'Invidunt interdum condimentum ametduis, leopraesent tempus placerat aaenean ad.']
```

2.1 random_words Package

2.2 lorem_ipsum Module

```
class random_words.lorem_ipsum.LoremIpsum
    Bases: object

    MAX_WORDS = 15
    MIN_WORDS = 2

    get_sentence()
        Return a sentence.

        Returns string with sentence
        Return type str

    get_sentences(sentences=1)
        Return sentences in string.

        Parameters sentences (int) – how many sentences.
        Returns string with sentences
        Return type str

    get_sentences_list(sentences=1)
        Return sentences in list.

        Parameters sentences (int) – how many sentences
        Returns list of strings with sentence
        Return type list
```

make_sentence (*list_words*)

Return a sentence from list of words.

Parameters **list_words** (*list*) – list of words

Returns sentence

Return type str

2.3 random_words Module

class random_words.random_words.**Random** (*file*)

Bases: dict

check_count (*count*)

Checks count

Parameters **count** (*int*) – count number ;)

Raises ValueError

load_emails (*file*)

Load list from file for random mails

Parameters **file** (*str*) – filename

load_file (*file*)

Parameters **file** (*str*) – filename

load_nicknames (*file*)

Load dict from file for random nicknames.

Parameters **file** (*str*) – filename

load_nouns (*file*)

Load dict from file for random words.

Parameters **file** (*str*) – filename

class random_words.random_words.**RandomEmails**

Bases: *random_words.random_words.Random*

randomMail ()

Return random e-mail.

Return type str

Returns random e-mail

randomMails (*count=1*)

Return random e-mails.

Return type list

Returns list of random e-mails

class random_words.random_words.**RandomNicknames**

Bases: *random_words.random_words.Random*

random_nick (*letter=None, gender=None*)

Return random nick.

Parameters

- **letter** (*str*) – letter
- **gender** (*str*) – 'f' for female, 'm' for male and None for both

Return type str

Returns random nick

random_nicks (*letter=None, gender='u', count=1*)

Return list of random nicks.

Parameters

- **letter** (*str*) – letter
- **gender** (*str*) – 'f' for female, 'm' for male and None for both
- **count** (*int*) – how much nicks

Return type list

Returns list of random nicks

Raises ValueError

class random_words.random_words.**RandomWords**

Bases: [random_words.random_words.Random](#)

random_word (*letter=None*)

Return random word.

Parameters **letter** (*str*) – letter

Return type str

Returns random word

random_words (*letter=None, count=1*)

Returns list of random words.

Parameters

- **letter** (*str*) – letter
- **count** (*int*) – how much words

Return type list

Returns list of random words

Raises ValueError
